

KAM INTELLIGENCE PLATFORM

Product Requirements Document

PRD V3 — Consolidated Feature and Module Specification

Product / Feature Name	KAM Intelligence Platform
Document Version	V3.0 Consolidated PRD
Status	Draft for Stakeholder Review
Prepared Date	21 May 2026
Primary Source Documents	KAM PRD V1, KAM PRD V2, current React design prototype
Scope Rule	V2 is the controlling baseline. V1 fills detail gaps where it does not conflict.
MVP Rule	All V2 Section 16.1 items are treated as PHASE 1. Section 16.4 remains out of scope.
Approved Integrations	Google Calendar, Fathom, CSAT, AI/LLM Gateway only

15.3 AI Account Briefs	36
15.4 AI-Assisted KYC Agent Workstreams	37
15.5 AI Stage Prediction	38
15.6 AI Task Summary Dashboard Card	39
15.7 Predictive Forecast Charts	39
15.8 Governance AI Brief Enhancements	40
15.9 New Requirement Summary	40

1. Executive Summary

The KAM Intelligence Platform is an internal post-sales strategic account management system for Tkxel. It centralizes project charter and SOW-led account onboarding, multi-engagement context, KYC intelligence, stakeholder relationships, health scoring, deterministic signals, playbooks, opportunities, retention activity, client education, escalations, governance, timeline history, AI assistance, and executive reporting into one operating workspace.

The platform replaces fragmented spreadsheet, document, email, and meeting-memory workflows with a structured, auditable, and proactive KAM operating model. It does not replace pre-sales pipeline management, project management, or HR systems. The platform begins after an account is nominated for key-account governance and uses uploaded project charters and SOWs as primary source material for draft account, engagement, and KYC creation.

Business Outcome	Expected Impact
Retention Protection	Earlier visibility into account health, weak signals, renewal risk, stakeholder gaps, CSAT decline, and escalation aging.
Expansion Growth	Structured whitespace, service adjacency, opportunities, playbooks, and account planning support upsell and cross-sell.
Operational Consistency	KAM execution becomes repeatable through configured metrics, signals, playbooks, tasks, reminders, and dashboards.
Executive Visibility	Leadership sees strategic health, retention outlook, revenue risk, major escalations, and required decisions.
Institutional Memory	Timeline, KYC versions, score snapshots, decisions, and handover summaries preserve context across ownership changes.
Faster Insight Access	AI Search and semantic search help authorized users retrieve answers from account data, timeline, notes, and attachments.

2. Product Goals and Success Metrics

Goal	Measure
Retain key accounts	100% of critical/red accounts have an owner, signal review, and action plan.
Improve account governance	95% of active accounts have current KYC, accountable AM, engagement records, and next governance date.
Improve health visibility	90% of active accounts have fresh score snapshots based on configured cadence.
Reduce unmanaged risk	95% of critical signals and escalations are reviewed within configured SLA.
Improve handover quality	100% of AM ownership changes include a generated handover summary and timeline review.
Improve insight speed	AI Search returns explainable, permission-aware answers for supported structured queries within target response time.

3. Personas and Role Model

Role	Primary Purpose	Key Responsibilities
Account Manager / KAM	Primary operational owner for assigned accounts.	Maintain Account Overview, trigger/review KYC, manage stakeholders, review signals, select playbooks, track opportunities, create escalations, and maintain timeline.
KAM Head / VP	Portfolio governance and configuration owner.	Assign AMs, monitor portfolio, approve overrides, configure scoring/signals/playbooks, intervene on escalations, and review dashboards.
Leadership Viewer / Executive	Strategic visibility consumer.	View portfolio health, strategic risks, growth opportunities, retention outlook, major escalations, summaries, and decision items.
Admin	Platform administration.	Manage users, roles, access, reference data, settings, audit, retention, integrations, event types, and technical configuration.

4. Complete Module Catalog

Module	Purpose
Account Onboarding and Workspace	Project charter and SOW-led account onboarding, draft account creation, owner assignment, lifecycle status, source documents, and account-level context.
Engagement/SOW Management and Engagement 360	Track multiple engagements under each account, each with one or more charters/SOWs, operational health, resource dependency, commercial terms, renewal intelligence, risks, activities, and timeline context.
Account Overview	Unified profile for KYC, stakeholders, account plan, scores, signals, tasks, opportunities, escalations, governance, attachments, timeline, and AI intelligence.
KYC and AI-Assisted KYC	AI-assisted extraction from charters/SOWs, AI research enrichment through configured sources, AM manual entry, AM fact-checking of AI-populated entries, user review, approved immutable snapshots, source context, and metric effects only after approval.
Stakeholder and Relationship Management	Stakeholder map with role, influence, relationship strength, sentiment, coverage gaps, and interaction history.
Account Planning, Whitespace, and Service Catalog	Account plans, service adjacency, whitespace inputs, growth and retention focus, risks, commitments, and next actions.
Growth and Opportunity Management	Account-level and engagement-level opportunities with type, value, stage, owner, next action, and source-linked timeline history.
Retention and Account Stability	Renewal readiness, SOW expiry and notice-window intelligence, stabilization plans, weak-metric actions, continuity risks, and recovery motions.
Configurable Scoring and Metric Engine	Metric definitions, formula rules, weights, thresholds, freshness, account/engagement rollups, and versioned snapshots.
Rule-Based Signals and Attention Center	Deterministic signals with reason codes, source evidence, SOW renewal and notice-window triggers, lifecycle, SLA aging, and playbook recommendations.
Playbooks, Activities, Tasks, and Calendar	Configurable playbooks selected by AMs, task creation, evidence capture, ownership, due dates, skip reasons, and calendar views.
Client Education and Content	Manual or linked content catalog, content tags, recommended education actions, and sent-content history.
Escalation Management	Manual escalation workflow with owner, severity, SLA, operations updates, mitigation, resolution, RCA, and timeline history.
Governance and Reviews	QBR, SteerCo, executive review scheduling, agendas, meeting notes, decisions, actions, and calendar/Fathom context.
Account History and Timeline	Chronological source-linked record of all account-relevant events with filters, search, before/after values, retention, RBAC, and sensitive entry support.
Handover Summary	System-assembled account handover with recent timeline, health, risks, opportunities, escalations, decisions, stakeholders, and governance.
Notifications, SLA Escalation, and Executive Digests	In-app and email notifications, escalation to KAM Head after inactivity, user preferences, and scheduled executive digests.
Dashboards and Reporting	AM Home, KAM Head Portfolio, Leadership Dashboard, Account Overview, Engagement 360, Attention Center, and configurable reports.

Module	Purpose
AI Assistance, AI Search, and Semantic Search	AI KYC drafts, charter/SOW extraction, AI research enrichment, signal explanations, cited summaries, permission-aware search, timeline search, and semantic search over notes/documents.
Approved Integrations	Google Calendar, Fathom, CSAT, and AI/LLM Gateway through controlled adapters, retries, deduplication, research-source governance, and audit logs.
Admin, Audit, Retention, Security, and RBAC	Role/access controls, reference data, metric rules, signal rules, playbooks, timeline event types, retention, audit, and sensitive policies.
Analytics, Benchmarking, and Portfolio Intelligence	Benchmarking across segments, industries, engagement types, account health, escalations, opportunities, content effectiveness, and KAM performance.
Multi-owner and Multi-tenant Readiness	Matrix ownership and architecture readiness for multi-tenant deployment if the business requires it.

5. Functional Requirements

All requirements in this section are PHASE 1 unless explicitly marked otherwise. Requirement IDs are renumbered for V3 and grouped by module for implementation traceability.

5.1 Account Onboarding and Workspace

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-001	PHASE 1	KAM Head / Admin	Start account onboarding from one or more uploaded project charters and SOWs for a nominated client. AI prepares a draft account workspace with account name, lifecycle status, segment, region, service context, commercial summary, initial notes, and source citations.	KAM Head can review, edit, approve, or reject the draft account. Only an approved draft becomes an official Account Overview workspace visible in dashboards.
V3-FR-002	PHASE 1	KAM Head / Admin	Assign one primary Account Manager during onboarding and record assignment rationale in audit history and timeline.	Assignment records show the previous owner (where applicable), new owner, actor, timestamp, rationale, and related charter/SOW source.
V3-FR-003	PHASE 1	KAM Head / Admin	Support account lifecycle statuses: Onboarding, Active, At Risk, Renewal Focus, Expansion Focus, Dormant, and Archived.	Status is visible on Account Overview, filterable in dashboards, and recorded on the timeline when changed.
V3-FR-004	PHASE 1	KAM / Admin	Attach project charters, SOWs, files, links, and source references to account and engagement records without requiring a third-party repository integration.	Attachments are visible from record detail, can be cited by AI extraction, and can be referenced from source-linked timeline events.
V3-FR-005	PHASE 1	KAM Head / Admin	Support multi-owner or matrix ownership where enabled, including primary AM, supporting AMs, Ops Lead, and leadership sponsor at account and engagement levels.	Matrix owners can be added, removed, audited, and used for filters, notifications, tasks, and engagement access.

5.2 Engagement/SOW Management and Engagement 360

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-006	PHASE 1	KAM	Create one or more Engagement/SOW records under an account from approved charter/SOW drafts or manual entry.	Each engagement includes name, source document links, start date, end date, renewal date, notice period, owner, service lines, value, delivery status, and related risks.
V3-FR-007	PHASE 1	KAM Head	Provide Engagement 360 details covering engagement profile, charter/SOW evidence, delivery health, resource dependency,	Users can open an engagement and understand operational health, commercial health,

ID	Priority	Persona	Requirement	Acceptance Criteria
			commercial context, renewal intelligence, risks, activities, escalations, attachments, and timeline.	source documents, renewal posture, and required actions.
V3-FR-008	PHASE 1	Platform	Roll engagement health into Account Health using configurable metric rules.	Account Health shows engagement contribution and preserves snapshots when formulas change.
V3-FR-009	PHASE 1	Platform	Create engagement-level timeline events for charter upload, SOW upload, SOW term extraction, health changes, operational changes, activities, and escalation activity.	Engagement events appear in both Engagement 360 and Account Timeline with source links to documents, records, and AI extraction runs.

5.3 Account Overview

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-010	PHASE 1	KAM / KAM Head	Provide Account Overview as the primary workspace for account profile, engagements, KYC, stakeholders, plan, scores, signals, activities, opportunities, education, escalations, governance, attachments, timeline, and AI brief.	Account Overview gives a complete current-state and history view without requiring users to jump between disconnected modules.
V3-FR-011	PHASE 1	KAM	Show account summary cards for ARR/commercial value, stage, health, open signals, overdue activities, next governance event, open opportunities, and active escalations.	Summary cards update from the current account state and link to source sections.
V3-FR-012	PHASE 1	Leadership Viewer	Expose read-only Account Overview for leadership roles where operational editing is not permitted.	Leadership users can view account intelligence and executive summaries without seeing edit controls for restricted workflows.

5.4 KYC and AI-Assisted KYC

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-013	PHASE 1	KAM Head / KAM	Trigger AI-assisted KYC draft creation from Account Overview or during charter/SOW onboarding.	AI KYC starts only when authorized users request it or submit onboarding source documents, and the output clearly displays draft status.

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-014	PHASE 1	AI / KAM	Generate AI KYC draft content using approved charters/SOWs, existing account and engagement records, prior KYC snapshots, attachments, user-provided notes, and configurable AI research sources such as Trivoly, ZoomInfo, and CrunchBase through the AI/LLM Gateway.	Draft output includes source citations, confidence level, conflicts, missing fields, and differences from the previous approved snapshot where available.
V3-FR-015	PHASE 1	KAM Head / KAM	Allow users to review, edit, enrich, approve, or reject AI-created account, engagement, and KYC drafts.	Only approved account, engagement, and KYC records become official platform intelligence.
V3-FR-016	PHASE 1	Platform	Store approved KYC snapshots as immutable versions with approver, timestamp, source context, extraction run, and change summary.	Previous approved snapshots remain viewable and cannot be silently overwritten.
V3-FR-017	PHASE 1	Platform	Prevent draft account, engagement, and KYC content from changing official metrics until approved.	Unapproved drafts have no effect on Account Health, Engagement Health, signals, renewal posture, or stage.
V3-FR-018	PHASE 1	Platform	Create timeline events for charter upload, SOW upload, AI extraction, draft creation, AI research enrichment, approval, rejection, KYC version creation, and score impacts.	Timeline entries link back to the source document, extraction run, KYC snapshot, account draft, or engagement draft.
V3-FR-019	PHASE 1	KAM Head	Show KYC freshness, completeness, missing fields, stale status, source coverage, and confidence level.	Dashboards and Account Overview clearly identify stale, incomplete, low-confidence, or conflicting KYC fields.

5.5 Stakeholder and Relationship Management

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-020	PHASE 1	KAM	Maintain stakeholder maps at account and engagement levels.	Stakeholders can be tagged by configurable role such as executive sponsor, economic buyer, technical decision maker, operational POC, commercial owner, or influencer.
V3-FR-021	PHASE 1	KAM	Track stakeholder influence, relationship strength, sentiment, political risk, and engagement history.	Attributes are visible on stakeholder profiles and feed relationship metrics where configured.
V3-FR-022	PHASE 1	Platform	Generate stakeholder coverage gap signals using configurable rules.	Example gaps include: no executive sponsor, no commercial owner, or only one active stakeholder.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-023	PHASE 1	Platform	Create timeline entries for stakeholder additions, major relationship changes, and important stakeholder interactions.	Relationship history is visible during handover and executive review.
V3-FR-024	PHASE 1	Leadership Viewer	Provide deeper stakeholder org-chart visualization.	Users can view decision influence and relationship coverage in a visual structure.

5.6 Account Planning, Whitespace, and Service Catalog

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-025	PHASE 1	KAM	Maintain a Basic Account Plan for each active account.	Plan includes retention focus, growth focus, risks, opportunities, commitments, service gaps, and next actions.
V3-FR-026	PHASE 1	KAM / Admin	Maintain service catalog and service adjacency configuration.	Configured services drive whitespace analysis and recommendations.
V3-FR-027	PHASE 1	KAM	Capture whitespace inputs and adjacent-service opportunities at account and engagement levels.	Whitespace inputs can influence growth/opportunity scoring and account planning.
V3-FR-028	PHASE 1	Platform	Recommend advanced service adjacency opportunities from configured service relationships and account context.	Recommendations show rationale and are not automatically converted to opportunities.

5.7 Growth and Opportunity Management

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-029	PHASE 1	KAM	Create account-level and engagement-level opportunities.	Opportunity includes type, service line, value, owner, stage, next step, target date, and source context.
V3-FR-030	PHASE 1	Admin / KAM Head	Configure opportunity types such as cross-sell, upsell, renewal, expansion, rescue/recovery, and other.	Configured opportunity types appear in forms, filters, reports, and analytics.
V3-FR-031	PHASE 1	KAM	Track opportunity stages in a board and list view.	Users can move opportunities through stages, filter them, and see pipeline totals.
V3-FR-032	PHASE 1	Platform	Emit timeline events for opportunity creation, stage changes, wins, losses, deferrals, and source-linked decisions.	Timeline entries include before/after values for key opportunity changes.

5.8 Retention and Account Stability

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-033	PHASE 1	KAM / KAM Head	Track renewal readiness, renewal risk, SOW start and end date, renewal date, notice-period deadline, auto-renewal terms, commercial exposure, days to expiry, accountable owner, confidence level, and source citation from approved SOW terms or manual inputs.	Renewal risks, SOW expiry, and notice deadlines appear in Account Overview, Engagement 360, dashboards, signals, tasks, calendar, and reports.
V3-FR-034	PHASE 1	KAM	Create retention, renewal, and stabilization plans for applicable account and engagement states.	Plans include actions, owners, due dates, success criteria, renewal milestones, and timeline history.
V3-FR-035	PHASE 1	Platform	Recommend stability and renewal actions based on weak metrics, signals, account stage, engagement posture, SOW end date, and notice window.	Recommendations show rationale and require user selection before tasks are created.

5.9 Configurable Scoring and Metric Engine

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-036	PHASE 1	KAM Head / Admin	Configure Metric Definitions with name, scope, weight, thresholds, freshness rule, owner, source, and effective date.	Admins can create, edit, activate, deactivate, validate, and version metrics without engineering support.
V3-FR-037	PHASE 1	Platform	Calculate scores at both Account and Engagement levels.	Engagement scores roll up into Account Health according to configured rules.
V3-FR-038	PHASE 1	Platform	Use inputs from approved KYC, opportunities, stakeholder map, activities, escalations, governance, CSAT, manual commercial fields, and Ops updates.	Score drivers identify which inputs influenced the score.
V3-FR-039	PHASE 1	Platform	Support event-driven recalculation when relevant data changes.	Impacted metrics are recalculated or marked dirty based on configuration.
V3-FR-040	PHASE 1	Platform	Support scheduled daily recalculation for stale data, time-based rules, overdue actions, and renewal proximity.	Scheduled runs create job logs and update stale indicators.
V3-FR-041	PHASE 1	KAM / KAM Head	Support manual/on-demand recalculation before reviews.	Authorized users can refresh scores and see calculation status.

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-042	PHASE 1	Platform	Show freshness metadata, last calculated timestamp, trend, status, score drivers, and reason codes for every score.	Users can understand why a score exists and whether it is stale.
V3-FR-043	PHASE 1	Platform	Retain score history as Metric Snapshots.	Historical values remain available even when formulas, thresholds, or weights change.
V3-FR-044	PHASE 1	Admin	Validate scoring configuration before publish.	System blocks invalid formulas, missing weights, conflicting thresholds, circular dependencies, or invalid freshness rules.

5.10 Rule-Based Signals and Attention Center

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-045	PHASE 1	Platform	Generate deterministic signals using configured rules, including SOW expiry, renewal date, notice-period deadline, stale KYC, and weak-metric triggers.	AI is not the authoritative source of signals in MVP.
V3-FR-046	PHASE 1	Platform	Each signal shall display reason codes, evidence, severity, source records, created date, owner, age, confidence level where derived from documents, and source citation.	Users can understand why the signal exists, which source supports it, and what action is required.
V3-FR-047	PHASE 1	KAM	Support signal lifecycle statuses: New, Reviewed, Accepted, Dismissed, Converted, and Resolved.	Lifecycle changes are audited and can emit timeline entries where configured.
V3-FR-048	PHASE 1	KAM Head / Admin	Map signals to recommended playbooks using configurable rules.	Users see recommended playbooks from the signal detail.
V3-FR-049	PHASE 1	KAM / KAM Head	Provide Attention Center for signals, severity, age, review status, recommended playbooks, SLA reminders, ownership, SOW expiry, and notice-window tasks.	Attention Center answers what needs attention today and highlights renewal windows before deadlines pass.
V3-FR-050	PHASE 1	AI / KAM	Allow optional AI explanation of deterministic signals.	AI explanation is advisory, source-backed, clearly labeled, and does not change signal status automatically.

5.11 Playbooks, Activities, Tasks, and Calendar

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-051	PHASE 1	KAM Head / Admin	Configure playbook templates with objective, signal types, weak metrics, activities, default owners, due dates, success criteria, and skip rules.	Templates can be created, edited, versioned, activated, and deactivated.
V3-FR-052	PHASE 1	KAM	AM selects a recommended playbook to execute.	System does not auto-execute playbooks without user selection.
V3-FR-053	PHASE 1	Platform	Selected playbooks create account-specific activities and tasks.	Tasks include owner, due date, status, priority, notes, evidence, outcome, and source signal or metric.
V3-FR-054	PHASE 1	Ops Lead	Ops Lead can contribute to assigned operational activities.	Ops updates flow into task history and timeline where configured.
V3-FR-055	PHASE 1	Platform	Activity completion influences metrics only through underlying data changes.	Completing a task does not artificially improve health scores.
V3-FR-056	PHASE 1	KAM	Display activities, SOW end dates, renewal dates, notice deadlines, and due dates in a unified calendar with governance events.	Users can filter the calendar by governance, score activities, renewal items, account, engagement, owner, and my items.

5.12 Client Education and Content

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-057	PHASE 1	KAM	Maintain a lightweight client education content catalog through manual entries, uploaded files, or linked URLs.	Content can be found and selected without relying on a third-party external content system integration.
V3-FR-059	PHASE 1	Platform	Recommend content based on account stage, opportunity, service gap, signal, or weak metric.	Recommendations show rationale and require user action before sharing is recorded.
V3-FR-060	PHASE 1	KAM	Track content shared with clients.	History includes content name, date, sender, recipient, account, engagement, follow-up status, and timeline link.

5.13 Escalation Management

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-061	PHASE 1	KAM / KAM Head	Allow authorized users to manually create formal escalations.	Escalation creation requires account/engagement, severity, owner, impact, SLA, and summary.
V3-FR-062	PHASE 1	KAM Head	Classify escalation severity and priority using configurable rules while preserving manual ownership.	System may recommend severity, but formal escalation remains human-owned.
V3-FR-064	PHASE 1	KAM / KAM Head	Track mitigation plan, recovery actions, client communication cadence, Watchlist status, and resolution summary.	Escalation cannot be closed without required closure evidence or authorized override.
V3-FR-065	PHASE 1	KAM Head	Require root cause analysis for major escalations.	RCA is stored with the escalation and linked from the timeline.
V3-FR-066	PHASE 1	Platform	Record structured notification metadata for every escalation-item alert raised to KAM Head. Notification records must capture recipient, channel, timestamp, related escalation ID, and escalation reason. The SLA inactivity trigger that raises these notifications is governed by V3-FR-083.	Notification log is accessible to Admin and KAM Head. Each notification entry links to the source escalation record. Duplicate notifications for the same escalation within the same SLA window are suppressed.

5.14 Governance and Reviews

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-067	PHASE 1	KAM	Schedule and track QBRs, SteerCos, monthly reviews, and executive reviews.	Events include account, engagement if applicable, date, attendees, agenda, notes, decisions, action items, and status.
V3-FR-068	PHASE 1	Platform	Generate governance agenda drafts from health, signals, opportunities, activities, escalations, and recent timeline.	Agenda draft is editable and clearly source-backed.
V3-FR-069	PHASE 1	KAM	Capture governance meeting notes, decisions, and action items.	Notes and decisions create timeline entries and can feed the handover summary.
V3-FR-070	PHASE 1	Platform	Use Google Calendar and Fathom integrations to create or enrich governance events where configured.	Synced events are deduplicated and require account tagging or mapping rules.

5.15 Account History and Timeline

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-07 1	PHASE 1	Platform	Maintain chronological account and engagement timelines from creation onward.	Users can view all authorized events in date/time order.
V3-FR-07 2	PHASE 1	Platform	Automatically create timeline entries for configured system events.	Events include account setup, charter upload, SOW upload, AI extraction, KYC, scores, stages, signals, tasks, opportunities, content, escalations, governance, approvals, executive decisions, integrations, and AI usage.
V3-FR-07 3	PHASE 1	KAM / KAM Head	Allow authorized users to manually add timeline notes with event type, date, owner, description, mentions, attachments, and sensitivity.	Manual notes appear in the timeline and can notify mentioned users.
V3-FR-07 4	PHASE 1	Admin	Configure timeline event types, categories, visibility, retention, active state, and source module.	Inactive event types remain preserved for historical entries but are hidden from new-entry selection.
V3-FR-07 5	PHASE 1	Platform	Link timeline entries to source records.	Users can open a linked account, engagement, charter, SOW, KYC snapshot, score, signal, task, opportunity, content item, escalation, governance event, approval, AI output, or attachment.
V3-FR-07 6	PHASE 1	Platform	Show before/after values for key changes.	Score, stage, owner, status, threshold, weight, signal status, escalation severity, SOW end date, renewal date, notice deadline, and approval changes retain previous value, new value, actor, and timestamp.
V3-FR-07 7	PHASE 1	KAM / KAM Head	Support timeline filters and keyword search.	Filters include event type, date range, owner, module, account stage, risk status, opportunity, escalation, governance activity, signal, and sensitivity.
V3-FR-07 8	PHASE 1	Admin	Enforce RBAC and sensitive-entry rules at the data layer.	Unauthorized users do not receive hidden entries or hints that restricted entries exist.
V3-FR-07 9	PHASE 1	Admin	Retain, archive, restrict, or delete eligible timeline entries according to configured policy.	Critical entries cannot be silently deleted and deletion uses audit-preserving tombstones.

5.16 Handover Summary

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-080	PHASE 1	KAM Head / Leadership Viewer	Generate account handover summary from current state and timeline.	Summary includes account, engagements, stage, health, score history, risks, signals, escalations, opportunities, governance, stakeholders, content, decisions, and recent timeline.
V3-FR-081	PHASE 1	Platform	Handover summary must cite source records and timeline entries where possible.	Users can open each cited source from the handover view.

5.17 Notifications, SLA Escalation, and Executive Digests

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-082	PHASE 1	Platform	Notify AM for new signals, overdue activities, stale KYC, upcoming renewals, unresolved escalations, mentions, comments, and governance reminders.	Notifications can be in-app and email based on user preference.
V3-FR-083	PHASE 1	Platform	Raise unresolved or inactive items to KAM Head after configurable time windows. This requirement is the authoritative SLA escalation trigger and covers all item types: open signals, critical activities, stale KYC, and formal escalation items. For escalation-specific notification metadata see V3-FR-066.	Escalation applies to signals, critical activities, stale KYC, and formal escalations. Each item type has an independently configurable inactivity window. KAM Head receives in-app and email notification per their preference settings (V3-FR-084). SLA timer resets on any qualifying activity against the item.
V3-FR-084	PHASE 1	User	Allow notification preferences per trigger and digest cadence.	Users can select in-app only, in-app plus email, or off where permitted.
V3-FR-085	PHASE 1	Leadership Viewer	Generate scheduled executive digests.	Digest includes strategic risks, retention outlook, growth opportunities, major escalations, and required decisions.

5.18 Dashboards and Reporting

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-086	PHASE 1	Account Manager / KAM	Provide AM Home dashboard.	Includes assigned accounts, signals, overdue activities, stale KYC, renewals, open escalations, opportunities, and tasks.

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-087	PHASE 1	KAM Head	Provide KAM Head Portfolio dashboard.	Includes health distribution, high-risk accounts, stale KYC, escalations, renewal focus, AM workload, overdue actions, and governance cadence.
V3-FR-088	PHASE 1	Leadership Viewer	Provide Leadership Dashboard.	Includes strategic health, retention, growth, revenue risk, major escalations, executive summaries, and decision queue.
V3-FR-089	PHASE 1	KAM Head / Leadership Viewer	Provide configurable report builder.	Users can choose fields, filters, date ranges, grouping, output layout, and export format within their permissions.
V3-FR-090	PHASE 1	Platform	All dashboards must prioritize operational attention.	The first question answered is: what needs attention today?

5.19 AI Assistance, AI Search, and Semantic Search

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-091	PHASE 1	KAM / AI	Provide AI-assisted charter/SOW extraction, KYC drafts, research enrichment, signal explanations, timeline summaries, account briefs, governance summaries, and executive summaries.	AI outputs are source-backed, labeled as AI-assisted, show confidence and limitations, and require human review before acceptance.
V3-FR-092	PHASE 1	All Users	Provide permission-aware AI Search / Natural Language Query across authorized platform data.	Results respect RBAC and show interpreted filters, source records, and confidence or data limitation notes.
V3-FR-093	PHASE 1	Admin	Configure AI Search business vocabulary, synonyms, searchable fields, default business terms, and object eligibility.	Admins can define terms such as red account, at risk, strategic account, inactive account, and growth-ready.
V3-FR-094	PHASE 1	Platform	Support semantic search over notes, charters, SOWs, and documents uploaded or attached in the platform.	Search results cite source document, attachment, note, page or section when available, and parent permission context.
V3-FR-095	PHASE 1	Admin	Log AI searches, accessed records, AI runs, source context, research sources, reviewer, accepted output, edited output, conflicts, and failure states.	AI audit logs are available to Admin and protected by role-based access.
V3-FR-096	PHASE 1	Platform	AI must not fabricate unsupported answers or field values.	When data is missing or low-confidence, AI states the limitation, cites available

ID	Priorit y	Persona	Requirement	Acceptance Criteria
				sources, and suggests next actions.

5.20 Approved Integrations

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-097	PHASE 1	Admin	Support integration adapter configuration only for Google Calendar, Fathom, CSAT, and AI/LLM Gateway.	No other integration appears as an MVP integration target.
V3-FR-098	PHASE 1	Admin / KAM	Google Calendar integration shall support governance events, review scheduling, account-tagged meetings, reminders, and timeline event generation.	Calendar events are mapped by account tagging or configured mapping rules and deduplicated before timeline write.
V3-FR-099	PHASE 1	Admin / KAM	Fathom integration shall support meeting transcript/summary intake for tagged governance and account meetings.	Fathom notes can enrich governance records and create timeline entries after user review or configured approval.
V3-FR-100	PHASE 1	KAM / KAM Head	CSAT integration shall support customer satisfaction score intake, trend display, scoring input, and timeline events.	CSAT updates show source, timestamp, account/engagement mapping, and score impact.
V3-FR-101	PHASE 1	Admin / Platform	AI/LLM Gateway integration shall support governed AI requests for charter/SOW extraction, KYC enrichment, summaries, search, explanations, semantic retrieval, and configurable AI research sources such as Travoly, ZoomInfo, and CrunchBase.	Gateway calls include source context, role permissions, request logs, research-source labels, error handling, response guardrails, and no direct expansion of the approved integration adapter list.
V3-FR-102	PHASE 1	Platform	All integrations shall support test connection, sync status, last synced timestamp, retry, deduplication, error logging, and Admin notification on repeated failures.	Failed critical syncs are logged and surfaced to Admin.

5.21 Admin, Audit, Retention, Security, and RBAC

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-103	PHASE 1	Admin	Manage users, roles, role inheritance, account access, engagement access, matrix ownership, and restricted permissions.	Admin can configure access for AM/KAM, Ops Lead, KAM Head/VP, Leadership Viewer, Admin, Content Specialist, Commercial Stakeholder, and Delivery Stakeholder where applicable.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-104	PHASE 1	Admin	Configure reference data and controlled taxonomies.	Reference data includes account statuses, stages, segments, industries, regions, opportunity types, stakeholder roles, signal types, escalation severities, governance types, and content tags.
V3-FR-105	PHASE 1	Admin	Configure scoring, signal, playbook, timeline event, retention, notification, SLA, and dashboard rules.	Configuration changes are validated, versioned, and audited.
V3-FR-106	PHASE 1	Platform	Maintain audit logs for critical business and configuration actions.	Audit logs include actor, timestamp, entity, previous value, new value, source, and reason where required.
V3-FR-107	PHASE 1	Platform	Apply least-privilege RBAC and field-level security for sensitive commercial, executive, escalation, legal, stakeholder, and attachment data.	Protected records and fields are never returned to unauthorized users.
V3-FR-108	PHASE 1	Admin	Support retention rules for timeline entries, AI outputs, KYC snapshots, score snapshots, audit logs, attachments, and reports.	Retention actions are logged and critical events preserve traceability.

5.22 Analytics, Benchmarking, and Portfolio Intelligence

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-109	PHASE 1	KAM Head / Leadership Viewer	Provide portfolio analytics for health trends, score drivers, escalation intelligence, opportunity intelligence, content effectiveness, and KAM performance.	Analytics are filterable by date range, AM, segment, industry, stage, and engagement type.
V3-FR-110	PHASE 1	Leadership Viewer	Benchmark accounts across segments, industries, and engagement types.	Benchmarking shows account/engagement performance against comparable cohorts.
V3-FR-111	PHASE 1	KAM Head	Provide proactive account-change alerts.	Alerts identify meaningful changes such as score drops, stale KYC, opportunity stagnation, escalation aging, renewal risk, stakeholder gaps, and governance overdue.

5.23 Multi-tenant Architecture Readiness

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-11 2	PHASE 1	Platform / Admin	Support architecture readiness for multi-tenant deployment if needed.	Tenant boundaries, configuration isolation, role scopes, audit separation, and data partitioning are accounted for in design even if initial deployment is single-organization.

6. Key Workflows

WF-01 — Account Onboarding from Charter/SOW

1. KAM Head uploads one or more project charters and SOWs for a nominated client.
2. AI parses each document and groups content by account and engagement.
3. System prepares a draft account if the client is new, or suggests linking to an existing account if matched.
4. System prepares one or more draft Engagement/SOW records under the account.
5. AI pre-fills KYC fields from charter/SOW evidence and enriches missing context through AI research sources.
6. Account Manager reviews extracted fields, source citations, confidence levels, conflicts, and missing fields.
7. On approval, the account, engagement records, and KYC snapshot become official.
8. Renewal dates, SOW end alerts, notice-period tasks, and calendar items are created from approved terms.

WF-02 — AI-Assisted KYC

1. Authorized user triggers AI KYC from Account details, an onboarding draft, or selected charter/SOW documents.
2. AI/LLM Gateway uses approved source documents, configured research sources, prior approved snapshots, attachments, notes, and available account/engagement context.
3. Draft highlights risks, opportunities, missing fields, conflicts, confidence levels, and source citations.
4. KAM Head or authorized owner reviews, edits, enriches, approves, or rejects.
5. Approved snapshot becomes immutable official intelligence.
6. Affected metrics, renewal posture, and signals evaluate only after approval, with timeline entries for draft, approval, version, and score impacts.

WF-03 — Scoring Engine / Health Scores

1. AM submits account scores and maps the scoring metrics or calculators on each account.
2. The scoring engine calculates a consolidated account health score based on submitted scores.
3. Accounts are classified using RAG status: Red, Amber, or Green.
4. Based on the consolidated score and RAG status, relevant activities and signals are triggered.
5. The system suggests improvement actions from the approved activity set to help raise the account health score.
6. Score changes, triggered activities, RAG movement, and improvement recommendations are reflected in account timelines and health-score reporting.

WF-04 — Scoring Refresh

1. Business data changes or a scheduled job runs.
2. Impacted metrics are recalculated or marked dirty.
3. System stores a score snapshot with drivers, freshness, status, and version.
4. Users can manually refresh scores before reviews.
5. Timeline captures material score changes with before/after values.

WF-05 — Signal to Playbook

1. Rule-based signal is generated with reason codes and evidence.
2. AM reviews signal in Attention Center.
3. AM accepts, dismisses, converts, resolves, or requests optional AI explanation.
4. System recommends playbooks from configured mappings.
5. AM selects a playbook and tasks are created.
6. Activities and outcomes create timeline history.

WF-06 — Escalation

1. AM or KAM Head manually creates an escalation.
2. Escalation captures severity, owner, SLA, impact, account/engagement, and summary.
3. Ops Lead adds delivery context, mitigation details, blockers, and status notes.
4. System tracks inactivity and SLA windows.
5. Resolution requires a summary and root cause for major escalations.
6. Timeline captures creation, status notes, severity changes, approvals, Watchlist, and closure.

WF-07 — Governance Review

1. Governance event is scheduled manually or through Google Calendar.
2. Fathom meeting notes can enrich the governance record after review.
3. Agenda is generated from health, signals, opportunities, activities, escalations, and timeline.
4. Notes, decisions, action items, and follow-ups are captured.
5. Timeline records governance completion and decisions.

WF-08 — Calendar and Fathom Sync

1. Admin configures mapping rules and account tagging.
2. Google Calendar imports tagged meetings and governance events.
3. Fathom imports tagged meeting summaries/transcripts.
4. System deduplicates events and flags unmapped items for review.
5. Approved or configured events create source-linked timeline entries.

WF-09 — CSAT Sync

1. CSAT source records are imported through the approved integration.
2. System maps score to account or engagement.
3. Score change can trigger recalculation, signal generation, and timeline entry.

4. Users see trend, timestamp, source, and impact.

WF-10 — AI/LLM Request Flow

1. User invokes AI KYC, AI Search, signal explanation, or summary.
2. System gathers only role-authorized context.
3. AI/LLM Gateway returns a source-backed draft or answer.
4. Output is labeled AI-assisted and requires human review where it changes business records.
5. Run metadata and source context are logged.

WF-11 — Timeline Review and Handover

1. User opens Account Overview Timeline.
2. Filters/search narrow relevant events.
3. User opens linked source records.
4. Handover summary assembles current state and recent events.
5. New owner or leader receives source-backed context.

WF-12 — Reporting and Executive Digest

1. User selects or schedules a report/digest.
2. System applies permissions, filters, and selected sections.
3. Report builder assembles dashboards, metrics, signals, opportunities, escalations, and summaries.
4. Digest delivery is logged and available to authorized recipients.

7. Non-Functional Requirements

Category	Requirement
Security	Role-based access and least privilege are enforced for accounts, engagements, timeline, attachments, AI context, reports, and sensitive fields.
Privacy	Sensitive notes, attachments, stakeholder data, commercial fields, and executive decisions follow access controls and audit policy.
Auditability	Critical business and configuration actions retain actor, timestamp, previous value, new value, source, and reason where applicable.
Reliability	Core workflows continue when AI or integrations are unavailable. AI failure must not block account governance.
Performance	Primary dashboards and Account Overview load within 3 seconds for standard views.
Timeline Performance	Latest 100 timeline entries load within 3 seconds; account timelines support 10,000+ entries.
Search Performance	Keyword search and structured AI Search return standard results within 5 seconds where backend services are healthy.
Scalability	Initial deployment supports 1,000+ key accounts, multiple engagements per account, and 250+ internal users.
Accessibility	Web UI targets WCAG 2.1 AA across desktop, laptop, and tablet breakpoints.
Maintainability	Metrics, thresholds, signals, playbooks, event types, retention, workflow timers, and notification rules are configuration-driven.
Observability	Background jobs, integration failures, AI runs, scoring errors, notification delivery, and configuration errors are logged.
AI Governance	AI outputs are labeled, source-backed, permission-aware, and human-reviewed before acceptance into authoritative records.

8. Approved Integrations

The only approved integrations for PRD V3 are Google Calendar, Fathom, CSAT, and AI/LLM Gateway. All other external systems are handled through manual entry, uploaded/linked evidence, CSV/manual input, or future consideration outside the approved integration scope.

Integration	MVP Purpose	Direction	Key Controls
Google Calendar	Governance scheduling, account-tagged meetings, review reminders, and timeline events.	Inbound / Outbound	OAuth, account mapping, deduplication, event type mapping, last sync, error log.
Fathom	Meeting summary/transcript intake for tagged governance and account meetings.	Inbound	Account tagging, user review where required, source link, sensitive handling, deduplication.
CSAT	Customer satisfaction score intake, trend display, scoring input, and timeline events.	Inbound	Account/engagement mapping, score source, freshness, trend, score impact, error handling.
AI/LLM Gateway	AI KYC, charter/SOW extraction, AI research enrichment, AI Search, semantic retrieval, summaries, and explanations.	Bidirectional	RBAC before retrieval, source context, configurable research sources (Travoly, ZoomInfo, CrunchBase), run logs, response disclaimers, no autonomous decisions.

9. AI Requirements and Guardrails

The following guardrails govern all AI functionality within the platform.

- AI may draft KYC, extract charter/SOW fields, enrich account context through configured research sources, explain deterministic signals, summarize timeline/account context, support AI Search, and assist with governance or executive summaries.
- AI must not directly create authoritative scores, signals, formal escalations, playbooks, approvals, or business decisions in MVP.
- AI-created account, engagement, KYC, and renewal fields remain in draft status until a human reviews and approves them.
- AI Search and semantic search must retrieve only role-authorized records and fields.
- Every factual AI claim must cite source records or state that data is insufficient.
- AI outputs must be clearly labeled as AI-assisted and require human review before being accepted into authoritative records.
- AI failures must not block core KAM workflows.
- All AI-generated outputs across every platform surface must display a non-dismissible disclaimer stating that the output is generated from recorded platform data and must be verified before use in client communication. This policy applies to all AI surfaces including Account Briefs, KYC drafts, Task Summary, Forecast Charts, Stage Prediction, Governance Briefs, and any future AI output surface. Individual surface requirements (V3-FR-127, V3-FR-135) reference this policy and must not restate it independently.

10. MVP Scope Checklist

Every item below is treated as PHASE 1 in PRD V3.

- Charter/SOW-led account onboarding with KAM Head draft approval
- Single primary AM assignment by KAM Head
- Account and multi-engagement/SOW management
- Project charter, SOW, attachment, and source-reference handling
- Stakeholder map and relationship attributes
- AI KYC extraction and research enrichment with AM approval
- Versioned KYC snapshot storage
- Account planning and opportunity tracking
- Whitespace inputs
- Operational health and resource dependency inputs
- Configurable scoring, thresholds, snapshots, and freshness display
- Rule-based signals with reason codes and evidence
- SOW expiry, renewal date, notice-period, and renewal-risk intelligence
- Draft account, engagement, and KYC approval workflow
- Configured playbooks and AM-selected execution
- Manual escalation workflow
- Operations updates and resolution history
- Account History and Timeline with charter/SOW events, system events, manual notes, filters, and linked records
- Notifications and SLA escalation
- AM, Ops Lead, KAM Head, Leadership Viewer, and Admin roles
- Operational and executive dashboards
- Handover summary
- Timeline search
- Integration-generated timeline events
- Sensitive timeline entries
- Advanced Google Calendar, Fathom, CSAT, and AI/LLM Gateway connectors
- Renewal signals, notice-window tasks, and calendar items from approved SOW terms
- AI-generated executive summaries and timeline summaries
- Configurable report builder
- Scheduled executive digests
- Deeper stakeholder org-chart visualization
- AI-powered timeline summaries
- Semantic search over notes and documents
- Proactive account-change alerts
- Advanced service adjacency recommendations
- Benchmarking across account segments, industries, and engagement types
- Multi-owner or matrix account ownership model

- Multi-tenant architecture readiness if needed

11. Explicitly Out of Scope

- Replacing sales pipeline or pre-sales account management systems.
- Replacing project management or detailed delivery task tracking systems.
- HR management, payroll, attendance, or employee performance tracking.
- Fully autonomous AI scoring, signal generation, escalation creation, or playbook execution.
- Any planned MVP integration outside Google Calendar, Fathom, CSAT, and AI/LLM Gateway.
- Native mobile application.
- Editing historical audit records without traceability.
- Storing informal emails, calls, or chats unless manually added or imported through an approved integration.
- Replacing all project-level delivery logs.

12. Risks and Mitigations

Risk	Likelihood	Impact	Mitigation
Unclear source data during onboarding	High	Medium	Define a minimum onboarding checklist and allow manual/CSV input plus attachments.
Over-reliance on AI output	Medium	High	AI drafts only, with source context, human approval, audit logs, and clear disclaimers.
Scoring perceived as a black box	Medium	High	Expose deterministic rules, drivers, freshness, reason codes, and snapshots.
Too many signals	Medium	Medium	Configurable severity, lifecycle, filters, default views, and KAM Head governance.
Playbooks too rigid	Medium	Medium	Recommend but do not auto-execute; allow AM selection, customization, skip reason, and outcome capture.
Operations updates not maintained	Medium	Medium	Freshness indicators, reminders, Ops Lead ownership, and escalation to KAM Head.
Escalation politics	Medium	High	Manual formal escalation only; system recommends and tracks, but humans own decisions.
Configuration complexity	Medium	Medium	Controlled forms, validation, defaults, versioning, test mode, and rollback support.
Timeline becomes noisy	Medium	Medium	Configurable event types, severity, source filtering, search, and default timeline views.
Sensitive entries exposed	Low	High	RBAC, field-level permissions, sensitive flags, access logs, and secure AI retrieval.
Duplicate integration events	Medium	Medium	Use source IDs, deduplication windows, mapping review, and integration error logs.
Multi-tenant scope uncertainty	Medium	Medium	Design architecture readiness but keep initial deployment single-organization unless confirmed.

13. Assumptions

- Approved integrations are limited to Google Calendar, Fathom, CSAT, and AI/LLM Gateway.
- No standalone entity-data section is included.
- Commercial fields are entered manually, through CSV/manual import, or through approved internal workflows, not through a planned finance integration.
- Account nomination happens outside the platform; the platform workflow begins after an account is nominated.
- AI assists with drafting, explanation, summarization, and search, but humans own formal decisions.
- Initial deployment is for one organization, with multi-tenant readiness only if needed.
- One client/account can have multiple engagements, and each engagement can have one or more project charters and SOWs.
- Trivoly, ZoomInfo, and CrunchBase are configurable AI research sources accessed through the AI/LLM Gateway rather than standalone MVP integration adapters.
- AI-created account, engagement, KYC, and renewal fields require approval from the KAM Head or an authorized owner before becoming official records.

14. Decision Log

Decision	Status
V2 is primary product direction for PRD V3.	Resolved
All V2 Section 16.1 items are PHASE 1.	Resolved
Section 16.4 items remain out of scope.	Resolved
Approved integrations are Google Calendar, Fathom, CSAT, and AI/LLM Gateway only.	Resolved
PRD V3 omits a standalone entity-data section.	Resolved
AI is advisory and human-reviewed; it does not create authoritative scores, signals, escalations, or playbooks in MVP.	Resolved
Signals are deterministic and rule-based in MVP.	Resolved
Formal escalations are manually created by authorized users only.	Resolved
Timeline is part of Account Overview and not a disconnected module.	Resolved
Account onboarding is charter/SOW-led and draft-first before official record creation.	Resolved
Multiple engagements and multiple charters/SOWs per account are in PHASE 1.	Resolved
SOW expiry, renewal date, notice deadline, and renewal-risk intelligence are PHASE 1.	Resolved
Travoly, ZoomInfo, and CrunchBase are AI research sources through AI/LLM Gateway, not standalone approved integration adapters.	Resolved

15. AI Module Supplementary Requirements

This section captures functional requirements identified during design review of the AI module specifications. These requirements supplement Section 5.19 (AI Assistance, AI Search, and Semantic Search) and cover capabilities present in the V3 design prototype that were absent or under-specified in earlier PRD sections. All items below are PHASE 1 unless marked otherwise.

15.1 KAM AI Query Dashboard

The KAM AI Query Dashboard is a persistent, globally accessible AI assistant panel available across all platform screens.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-113	PHASE 1	All Users	Provide a persistent KAM AI launcher accessible from all platform screens via a fixed bottom-right entry point. Opening the launcher displays the KAM AI Query Dashboard.	Launcher is visible and accessible from Account Overview, dashboards, timeline, governance, and all other primary views without requiring navigation away from the current screen.
V3-FR-114	PHASE 1	All Users	Provide an account-context selector within the KAM AI panel that allows users to switch the AI query scope to any account they are authorized to access.	Switching account context resets the active query scope and loads the most recent query history for the selected account. RBAC is enforced — only authorized accounts appear in the selector.
V3-FR-115	PHASE 1	All Users	Provide scope toggles within the KAM AI panel for Timeline, Opportunities, Governance, Notes, and KYC. An optional Document Search toggle enables semantic search over attached documents.	AI queries execute only against scopes that are toggled on. Document Search is off by default and must be explicitly enabled per query session.
V3-FR-116	PHASE 1	Platform	Display suggested prompts within the KAM AI panel tailored to the active account context and current platform state.	Suggested prompts update when the account context changes and include examples such as: Summarise this account, What changed in the last 90 days, Show the escalation history, Who approved the stage override, and Forecast next 6 months.
V3-FR-117	PHASE 1	Platform	Store and display recent query history per account within the KAM AI panel.	Query history is scoped to the selected account, persists across sessions for the authenticated user, and can be rerun from the history list.
V3-FR-118	PHASE 1	Platform	Return structured answer cards from KAM AI queries that display detected intent, confidence level, AI disclaimer, and source citations linking to the originating platform records.	Answer cards clearly distinguish AI-generated content from source data. Users can open cited source records directly from the answer card.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-119	PHASE 1	Platform	Support forecast and chart response output within the KAM AI panel when users ask for projections, trends, charts, graphs, or next-period forecasts.	Forecast responses are rendered as directional visual charts inside the KAM AI panel. Outputs are labeled as directional and require verification before use. See V3-FR-131 and V3-FR-132 for detailed forecast requirements.

15.2 AI Timeline Search Enhancements

The following requirements extend the base timeline search capability (V3-FR-077) with structured intent recognition and handoff behavior.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-120	PHASE 1	KAM / KAM Head	Support structured intent recognition within AI Timeline Search for the following known query categories: escalation history, stage changes, score changes, last 90 days of activity, approval events (who approved), content sent to client, activity since last QBR, and open opportunities.	Recognized intents return structured filtered results directly from the matching event categories. Intent detection is displayed on the answer card so users can verify the interpretation.
V3-FR-121	PHASE 1	Platform	Apply semantic result ranking within AI Timeline Search when no structured intent matches the user query.	Semantic ranking uses the query text against timeline event content and returns the most relevant events with source citations. Results are labeled as semantic matches to distinguish them from structured intent responses.
V3-FR-122	PHASE 1	KAM / KAM Head	Provide a 'Try in KAM AI' handoff action on AI Timeline Search answer cards that opens the global KAM AI panel with the same query pre-populated.	Handoff transfers the exact query text and active account context to the KAM AI panel. Timeline scope toggle is pre-enabled when the handoff originates from the Timeline tab.

15.3 AI Account Briefs

The following requirements extend the base AI summary capability (V3-FR-091) with specific brief types, delivery behavior, and feedback mechanisms.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-123	PHASE 1	KAM / KAM Head /	Support four named brief types within the AI Account Brief card on Account Overview: Account Brief (full current-state	Each brief type produces a distinct cited output using the relevant data scope. Users can select the brief type

ID	Priority	Persona	Requirement	Acceptance Criteria
		Leadership Viewer	summary), Period Summary (summary of changes over a selected date range), Pre-Meeting Brief (context and talking points ahead of a governance event), and Risk Narrative (focused summary of active risks, weak signals, and escalations).	before generation. Brief type is displayed on the generated output card.
V3-FR-1 24	PHASE 1	Platform	Cache generated AI Account Brief outputs for one hour per account per brief type. Cached outputs are served on subsequent requests within the cache window. A manual refresh action forces regeneration and resets the cache.	Cache status and generation timestamp are displayed on the brief card. Users can see when the current output was generated and whether it is a cached or freshly generated result.
V3-FR-1 25	PHASE 1	KAM / KAM Head / Leadership Viewer	Provide thumbs-up and thumbs-down feedback controls on all AI Account Brief outputs.	Feedback is stored with the brief generation run, AI output version, and user identity. Feedback data is accessible to Admin for AI quality review.
V3-FR-1 26	PHASE 1	Leadership Viewer / Admin	Allow authorized users to edit a generated AI Account Brief. Saved edits are stored as a manually authored timeline note linked to the brief generation event.	The edited version is clearly distinguished from the original AI output. The linked timeline note preserves the original AI draft, the edited version, the editor identity, and the edit timestamp.
V3-FR-1 27	PHASE 1	Platform	Apply the platform-level AI disclaimer policy (Section 9) to all AI Account Brief outputs. The disclaimer is non-dismissible and displayed prominently on every generated brief output card.	Disclaimer text and non-dismissible behaviour conform to the platform AI disclaimer standard. No brief output card is rendered without the disclaimer present and visible. Compliance is verified as part of brief output rendering, not as a post-render overlay.

15.4 AI-Assisted KYC Agent Workstreams

The following requirements extend the base AI KYC capability (V3-FR-013 through V3-FR-019) with named agent workstreams, refresh controls, and completion tracking.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-1 28	PHASE 1	AI / Platform	Structure the AI-Assisted KYC Agent into five named workstreams executed sequentially or in parallel as configured: (1) Market Research — industry, market position, competitive landscape; (2) Client Research — company background, strategic priorities, recent news; (3) Stakeholder Details — key contacts, roles,	Each workstream produces a distinct set of KYC field outputs with individual confidence levels, source citations, and missing-field indicators. Workstream status (pending, running, complete, failed) is displayed separately so users can track progress across all five.

ID	Priorit y	Persona	Requirement	Acceptance Criteria
			reporting structure; (4) Tkxel Engagement with Client — engagement history, delivery performance, relationship quality; (5) Financial Landscape — commercial exposure, funding context, financial health signals.	
V3-FR-129	PHASE 1	KAM / KAM Head	Provide a Refresh AI Data action on the KYC screen that triggers a full re-run of all five agent workstreams for the current account.	Refresh is available only to authorized users. The previous run status, timestamp, and outputs remain visible until the new run completes. A running indicator is displayed during refresh. Refresh events create timeline entries.
V3-FR-130	PHASE 1	Platform	Display a KYC completion percentage on the KYC screen calculated from the ratio of populated required fields to total required KYC fields.	Completion percentage updates when fields are approved, edited, or cleared. The metric is visible on Account Overview, the KYC screen header, and KAM Head Portfolio dashboard stale-KYC indicators.

15.5 AI Stage Prediction

AI Stage Prediction is a new capability not previously specified in the PRD. It provides directional account stage forecasting on the Account Overview Stage tab to assist KAMs and KAM Heads in anticipating account trajectory.

ID	Priorit y	Persona	Requirement	Acceptance Criteria
V3-FR-131	PHASE 1	KAM / KAM Head	Provide an AI Stage Prediction capability on the Account Overview Stage tab that predicts the most likely next account lifecycle stage for the active account.	Stage prediction output includes: predicted next stage, confidence percentage, basis for prediction in plain language, contributing factors with evidence citations, and recommended next actions. Stage prediction is clearly labeled as AI-generated and directional.
V3-FR-132	PHASE 1	Platform	Generate AI Stage Prediction using the following inputs: KYC confidence and completeness, approved SOW documents and extracted renewal terms, recent timeline changes within the last 90 days, open pipeline and opportunity stage distribution, current Account Health score and RAG status, funding and commercial context from KYC, and active risk and signal status.	Each contributing input is listed on the prediction output with its weight or influence direction (positive, neutral, negative). Missing or low-confidence inputs are flagged as prediction gaps.
V3-FR-133	PHASE 1	KAM Head	Require human review and approval before any AI stage prediction is applied	The AI Stage Prediction output provides a recommended action

ID	Priority	Persona	Requirement	Acceptance Criteria
			as an actual account stage change. Stage changes remain governed by the existing stage-change workflow and emit immutable timeline events.	button that initiates the standard stage-change workflow. The prediction output itself does not alter the account stage record.

15.6 AI Task Summary Dashboard Card

The AI Task Summary card is a new synthesized intelligence component on the AM Home Dashboard, extending base dashboard requirements (V3-FR-086).

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-134	PHASE 1	Account Manager / KAM	Provide an AI Task Summary card on the AM Home Dashboard that synthesizes active task and attention-signal data across all accounts assigned to the authenticated user.	Summary card displays: count of open tasks, urgent tasks, tasks due today, and tasks due within 7 days; identification of accounts carrying the highest current task load; and highlighted overdue score-linked tasks and critical attention signals.
V3-FR-135	PHASE 1	Platform	Apply the platform-level AI disclaimer policy (Section 9) to all AI Task Summary outputs. The disclaimer is non-dismissible and displayed on the summary card.	Disclaimer text and non-dismissible behaviour conform to the platform AI disclaimer standard. The summary card does not render without the disclaimer present. Disclaimer placement does not obscure task data or action buttons.
V3-FR-136	PHASE 1	Platform	Refresh the AI Task Summary card on AM Home Dashboard load and on manual refresh. Stale indicator displays when the summary is more than one hour old.	Refresh timestamp is visible on the card. Users can trigger a manual refresh. Refresh does not block other dashboard sections from loading.

15.7 Predictive Forecast Charts

Predictive Forecast Charts are a new capability not previously specified in the PRD. They enable visual directional forecasting output within the KAM AI panel in response to projection queries.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-137	PHASE 1	KAM / KAM Head / Leadership Viewer	Support forecast queries within the KAM AI panel that return directional chart output for account-level projections. Supported forecast queries include six-month ARR projection, health score trend, and remaining modeled pipeline.	Forecast chart output renders visually inside the KAM AI panel. Charts display projected values, current baseline, and a directional trend line. Outputs are labeled as directional forecasts and require verification before use in planning or client communication.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-138	PHASE 1	Platform	Generate forecast chart data using the following inputs: current ARR and commercial exposure from approved KYC and SOW records, open pipeline value and opportunity stage distribution, current Account Health score and recent score trajectory, active risk and signal status, and recent timeline events within the last 90 days.	Each forecast output lists the data inputs used and flags missing or low-confidence inputs as forecast gaps. Forecasts based on incomplete data display a reduced-confidence indicator.
V3-FR-139	PHASE 1	Platform	Forecast chart outputs must be clearly labeled as AI-generated directional estimates. They must not be surfaced in executive reports, dashboards, or exports without explicit user action and confirmation.	Forecast charts are available only within the KAM AI panel response context. They do not auto-populate into Account Overview metrics, health scores, or any authoritative record.

15.8 Governance AI Brief Enhancements

The following requirements extend the base governance agenda generation (V3-FR-068) with a named AI Brief entry point on individual governance detail views.

ID	Priority	Persona	Requirement	Acceptance Criteria
V3-FR-140	PHASE 1	KAM / KAM Head	Provide an AI Brief action on individual governance event detail views (QBR, SteerCo, monthly review, executive review) that generates a pre-meeting context summary for the upcoming event.	AI Brief generates a pre-meeting summary that includes: account health snapshot, recent timeline changes since the last governance event, open signals and escalations relevant to the meeting, talking points derived from active opportunities and risks, and pending decisions or action items from the prior governance event.
V3-FR-141	PHASE 1	Platform	Governance AI Brief outputs must use source citations linking to the specific timeline events, signals, opportunities, and escalations used in the summary.	Users can open each cited source record directly from the governance AI Brief output. Citations are displayed inline alongside the relevant summary point.

15.9 New Requirement Summary

The following table lists all requirements added in Section 16 and their parent AI module.

ID	Requirement Summary	AI Module	Extends
V3-FR-113	Persistent KAM AI launcher across all screens	KAM AI Query Dashboard	New

ID	Requirement Summary	AI Module	Extends
V3-FR-114	Account-context selector in KAM AI panel	KAM AI Query Dashboard	New
V3-FR-115	Scope toggles: Timeline, Opportunities, Governance, Notes, KYC, Documents	KAM AI Query Dashboard	New
V3-FR-116	Suggested prompts tailored to active account context	KAM AI Query Dashboard	New
V3-FR-117	Per-account persistent query history	KAM AI Query Dashboard	New
V3-FR-118	Structured answer cards with intent, confidence, disclaimer, and citations	KAM AI Query Dashboard	V3-FR-091, V3-FR-092
V3-FR-119	Forecast and chart response output in KAM AI panel	KAM AI Query Dashboard	New — see FR-137–139
V3-FR-120	Structured intent recognition for 8 named timeline query categories	AI Timeline Search	V3-FR-077, V3-FR-092
V3-FR-121	Semantic result ranking fallback for unmatched timeline queries	AI Timeline Search	V3-FR-094
V3-FR-122	Try in KAM AI handoff from Timeline Search answer cards	AI Timeline Search	New
V3-FR-123	Four named AI brief types: Account, Period, Pre-Meeting, Risk Narrative	AI Account Briefs	V3-FR-091
V3-FR-124	One-hour brief output caching with manual refresh	AI Account Briefs	New
V3-FR-125	Thumbs-up/down feedback on all AI brief outputs	AI Account Briefs	New
V3-FR-126	Leadership/admin edit-to-timeline-note flow for AI briefs	AI Account Briefs	New
V3-FR-127	Non-dismissible disclaimer on all AI brief outputs	AI Account Briefs	New
V3-FR-128	Five structured KYC agent workstreams with individual status tracking	AI-Assisted KYC Agent	V3-FR-013–V3-FR-019
V3-FR-129	Refresh AI Data action triggering full KYC agent re-run	AI-Assisted KYC Agent	V3-FR-013
V3-FR-130	KYC completion percentage indicator	AI-Assisted KYC Agent	V3-FR-019
V3-FR-131	AI Stage Prediction with confidence, basis, and recommended actions	AI Stage Prediction	New
V3-FR-132	Stage prediction input model: KYC, SOW, timeline, pipeline, health, risk	AI Stage Prediction	New
V3-FR-133	Human-approval gate before prediction can trigger a stage change	AI Stage Prediction	V3-FR-015, V3-FR-096
V3-FR-134	AI Task Summary card on AM Home Dashboard	AI Task Summary	V3-FR-086
V3-FR-135	Non-dismissible disclaimer on AI Task Summary card	AI Task Summary	New
V3-FR-136	Auto-refresh with stale indicator for AI Task Summary	AI Task Summary	New

ID	Requirement Summary	AI Module	Extends
V3-FR-137	Predictive forecast charts in KAM AI panel (ARR, health, pipeline)	Predictive Forecast Charts	New
V3-FR-138	Forecast input model and missing-data gap flags	Predictive Forecast Charts	New
V3-FR-139	Forecast charts restricted to KAM AI panel — no auto-population into records	Predictive Forecast Charts	V3-FR-096
V3-FR-140	AI Brief action on governance detail views for pre-meeting context	Governance AI Brief	V3-FR-068
V3-FR-141	Inline source citations on Governance AI Brief outputs	Governance AI Brief	V3-FR-075, V3-FR-091
